

# HYLOGLO™ XANTINE

## ANTI-CELLULITE COMPLEX

### INCI NAME

Water, Glycerin, Theophylline, Theobromine, Caffeine, and Camellia Sinensis Leaf Extract

### USAGE LEVEL

1-5%

### DESCRIPTION

Most individuals have experienced cellulite throughout their lives. Cellulite is an abundance of adipocytes that causes a bumpy appearance on the skin. It is most common around the thighs, buttocks, breasts, and underarms and can contribute to insecurities. Due to this problem, we have introduced HyloGlo™ Xantine, which directly targets the adipocyte cells present in cellulite.

Xanthines play an important role in normalizing the adipose tissue. Ingredients such as caffeine have been well known for increasing circulation and promoting lipase enzymatic activity by stimulating cAMP. Both theophylline and theobromine stimulate beta-adrenergic receptors and can release fatty acids from adipocytes, resulting in a decreased appearance of cellulite. Camellia Sinensis Leaf Extract provides this complex with a natural source of caffeine, theobromine, and theophylline. By combining these actives into one complex, synergy can occur to provide a well-rounded answer to cellulite.

### BENEFITS

- Anti-cellulite
- Decreases Adipocyte Size
- Promotes Lymphatic Drainage
- Increases Microcirculation
