

Fermentoil series

New generation oil to improve your cosmetics

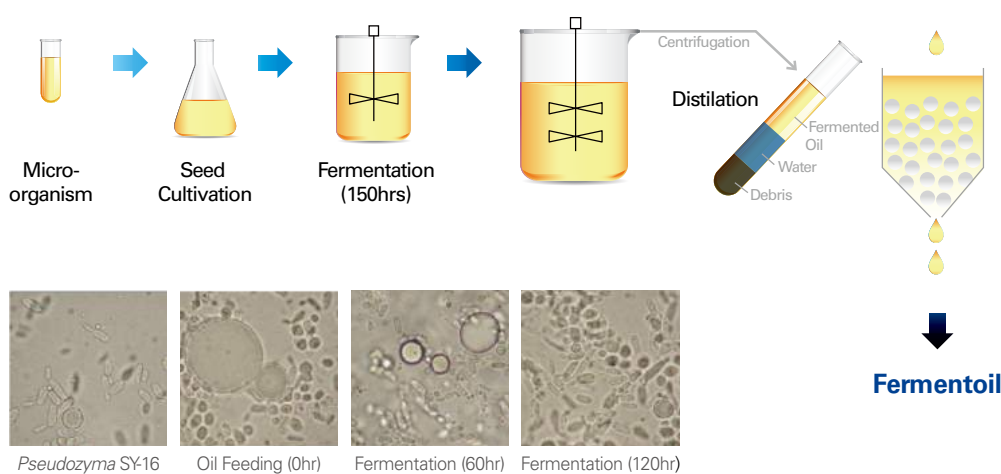

Benefit

Moisturizing, Anti-aging

The development of Fermentoil Series is aimed for better texture with better efficacy when compared to the conventional oil. The fermentation process enhances free fatty acid values, which is an essential part of the skin. Also, Fermentoil has better emulsifying capacities and provides a non-greasy feeling, while it is still a 100% natural oil.

New solution

Fermentation process

Feature

What changes during the fermentation?
